

Background:

By publishing the DIMACS Module Series, DIMACS is making available to students, teachers, researchers, and the general public materials published to promote interest in, understanding of, application of, and further research in the mathematical sciences, computer science, and related fields.

This publication involves the interests of DIMACS, the author(s) and perhaps those employing the author(s), and other parties, such as users of the materials, libraries, etc.. Consent to publish agreements exist to protect the interests of the author(s) and the publisher (DIMACS). Copyright law also attempts to protect the interests of the groups involved in the publication process. These interests involve recognition and reward for creative work done by the author(s) of the modules and the publisher (DIMACS) and access by users to the creative work. A subjective system of “fair use” has evolved which allows the use and reproduction of materials without specific permission under controlled circumstances.

Completion of the form below is necessary for publication by the authors (= Authors below) of a creative work (= MODULE below) in the DIMACS Modules Series. Note that the agreement requires that the Authors’ Copyright be transferred to DIMACS.

Consent and Copyright Agreement for publication of a MODULE in the DIMACS Modules Series

Title of Contribution (“MODULE”):

Centrality and Anticentrality in Trees

Authors:

Mike Ackerman

Sul-Young Choi

Atif Abuefda

1. The Authors agree that DIMACS publish the MODULE.

2. The Authors certify that:

(* the MODULE has not been published in the past or submitted simultaneously to a publisher other than DIMACS;

(* the MODULE represents the Authors' own work and that proper credits have been given to all contributors to the work, and that the Author can thereby cede it to DIMACS;

(* the MODULE does not infringe on someone else's copyright or violate any laws.

3. The Authors transfer to DIMACS the copyright for this MODULE. This gives to DIMACS complete and exclusive rights to publish in any form (print, electronic, etc.) this MODULE including the right to incorporate this MODULE or portions of it into other works (including translations) anywhere in the World. This transfer will apply for the whole life of the copyright including any renewals or extensions.

Note: If the Module was written by employees of the United States Government as part of the Authors' work duties, then the work is not subject to copyright and the copyright transfer aspects of this agreement only do not apply.

4. The Authors continue to have the right to reproduce this MODULE in any form for research and educational purposes provided that they, or others the Authors provide the MODULE to, do not collect income for the use or reproduction of the MODULE. The Authors also continue to be able to use all or part of this MODULE in the Authors' future works as long as DIMACS is credited in this form: "This work was published first in the DIMACS Module Series as (number, year, etc.), published by DIMACS", and copyright notice be given in all copies of such a future work.

Note: If the Authors have personal web sites they are encouraged to make the MODULE available to visitors to the web sites but give publication credit to DIMACS.

5. In the event of a request to reprint or translate this MODULE in whole or in part by a publisher other than a mathematical sciences or computer sciences professional society, an attempt will be made to inform the Authors.

Date: 6/2/09

Names (Please print): Sul-Young Choi
Atif Abueida
Michael Ackerman

Signatures: Choi, Sulyoung
Atif Abueida
Michael Ackerman

Note: This form must be signed by the Authors of the Module.
