

Parallel Network Simulations

So, what's been wrong with PDES in their first 10 years?

"The tools, stupid" (R. Bagrodia, ORSA J. Computing 1993)

- Modeling tools
- Model debugging tools
- Load management & performance feedback tools
- software engineering: N graduate students = N programming styles

What's OK for research **on** PDES, is not OK for working **with** PDES
